                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cameroon (forest strain) The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: slustigmenybo.org)."

Third-stage larvae, L3, were isolated from infected black files in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNAse H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 1026 independent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note="vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: /note="vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The

                                                                                                                                                                                                                                                                                                            Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                           //note="Wector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded CDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: slustigmenybo.org)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           genome@smith.edu

         /note="vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: /note="vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black files in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day I, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNAse H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note-"vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black files in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ש

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture mRNA was isolated from approximately do nolting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture.
                                                                                                                                                                                                                                                                                                                                                                                                              in culture, and converted to double-stranded CDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNAse H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email: slustigm@nybc.org)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3

Xho I; Filarial nematode parasite of humans. Third-stage
larvae, L3, were isolated from infected black files in
Cameroon (forest strain). The L3 were cultured in 20% FCS
in IMDM+ NCTC 135 and collected after day 1, 2 or 3 in
culture. L3 of O. volvulus molt to fourth-stage larvae by
day 5 in culture. mRNA was isolated from approximately
6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3
in culture, and converted to double-stranded cDNA using
reverse transcriptase and oligo(dT) followed by RNase H
and DNA pol I. The library was constructed in the lambda
Uni-Zap XR vector and has 1 x 10E6 independent
recombinants and the average insert size is -1200 bp. The
library was constructed by Sara Lustigman and Michelle
Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams.

                                                                                                                           prepn. of recombinant PHL. The protein may be truncated to comprise only residues 383-706 or 383-713. The PHL catalyses the reaction: R-GlyoH -> R-NH2. It can be used to produce peptides win amidated C-termini, e.g. calcitonin, growth hormone, LH-RH.
                                                                                                                                                                                     The sequence was deduced from a cDNA insert from pAE-III-202-4 (FERM BP-3172). The vector serves as a source for a DNA fragment encoding pHL for the construction of an expression vector for the prepn. of recombinant PHL. The protein may be truncated to
                                                                                                                                                                                                                                                           Novel DNA encoding peptidyl hydroxy:glycine N-C lyase (PHL) used to prepare PHL which can be used in the amidation of peptide(s) e.g. human calcitonin.

and their precursors deoxyribonucleic acid encoding sequences. Disclosure; 7pp; English.
The sequence encodes a derivative of the mature C-terminal alphamidating enzyme from plasmid pXA799.
The plasmid was screened from an E.coli library using plasmid pXA457 to screen a larger library.
Although pXA799 is similar to pXA457 at the N-terminus, it has an are hydrophobic elements suggesting a membrane function.
See also N93060.

Although the gene product is similar to that of pXA457 at the N-terminus, it has an area of hydrophobic elements suggesting a membrane function.

Jmu-1S cells (i.e. CHO cells expressing a peptidyl C-terminal alphamu-1S cells (i.e. CHO cells expressing a peptidyl C-terminal alphamuniase enzyme (AE)) were suspended in F-12 medium to which aliquots of trichostatin were added. Cells were cultured for 3 days at 37 deg and then assayed for AE. Without trichostatin, AE productivity was 708 U/ml. At 10, 50, 100 and 200 nM trichostatin, AE productivities were respectively 866, 1897, 1894 and 3359 U/ml.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     915

This sequence represents the feline infectious peritonitis 1 virus (FIPV-I) spike protein. The FIPV-I spike protein may be used in the production of a vaccine for the prevention and treatment of FIPV-I infection. The spike protein may be produced by transforming a host cell with the spike protein DNA and expressing the sequence such sequence 1464 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               10-JUN-1994; 129300.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Principles acid molecules specific for bacterial polysaccharide antigens - useful for detecting specific strains in, e.g. food, principles or patient samples

Principles or patient samples

Principles or patient samples

Principles or patient samples

Principles or patient samples

Principles or patient samples

Principles or patient sequence of the protein encoded by the wbdM gene of a gene cluster (see x06748) involved in the biosynthesis of the Escherichia coli Olli O antigen. The protein shows high the mology with TrsE of Versinia enterocholitica, and is predicted to be a colitose or glucose transferase. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wax (flippase) and wzy (polymerase) particularly wbd (transferase), wax (flippase) and wzy (polymerase) genes, within o antigen gene clusters improves the specificity of methods for the detection and identification of O antigens, e.g. in testing food- or faecal-derived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Align seg 1/1 to: W88310 from: 1 to:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Purified RNA polymerase II holo:enzyme - comprises RNA polymerase II
pri and one or more regulatory proteins, pref. suppressor of RNA
pri polymerase B proteins or SWI/SNF proteins
Pri polymerase B proteins or SWI/SNF proteins
Pri Claim 11; Fig 10a-b; 154pp; English.

Rovel yeast SRB (suppressor of RNA polymerase B) proteins SRB4, SRB5,
SRB6, SRB7, SRB8, SRB10 and SRB11 (W13821-28) are transcription
Cregulatory factors that act as positive and negative regulators of
CRNA polymerase II activity, and are components of the RNA polymerase
CI I holoenzyme. They were identified using methods designed to
Clientify transcription factors involved in RNA polymerase II
C-terminal domain (CTD) function. SRB8 and SRB9 appear to repress
CTD activity. Genomic clones (T59904-11) for the SRBs have been obtd.
SRBs can be used to treat diseases resulting from alteration or
Cende that modify gene, pref. by gene transfer technology. They
can also be used in in vitro transcription of DNA and to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Align seg 1/1 to: W13825 from: 1

CDNA libraries were prepared from human thyroid gland poly(A) RNA in libraries were prepared from human thyroid gland poly(A) RNA in lambda gtll and gtll. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gtll library, including gtllOchT2.

Restriction analysis indicated that gtlOchT2 encoded a different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C-terminal alpha amidating enzymes from human thyroid gland converting C-terminal glycyl peptide(s) or protein, and new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                488
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The enzyme is useful for prodn. of physiologically active alphamidated peptides from their C-glycyl precursors.                                                                                           Disclosure; pp; English.

CDNA libraries were prepared from human thyroid gland poly(A) RNA in lambda gt11 and gt10. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gt10 library, including gt10ch9101.

Restriction analysis indicated that gt10ch9101 encodes a different type of enzyme to one of the other two clones. The DNA can be inserted into vectors for expression in E.coli or (more efficiently)
in animal cells.

The enzymes are useful for prodn. of physiologically active alpha-amidated peptides from their C-glycyl precursors.
